

What's Happening to Load Growth?

2025 – 2030 Load Adjustment Breakdown:

- The era of datacenters has caused load growth to become:
 - More concentrated,
 - More disconnected from underlying economics,
 - And thus, more unpredictable.
- AEP is proactively addressing this by:
 - Making our forecasts as transparent as possible,
 - Relying on customer financial commitments more than predictive modeling to plan for new loads,
 - Working to ensure that system costs for new loads are distributed fairly and sustainably.
